

## System solutions

Together with our affiliated companies VSE Volumentchnik, DST Dauermagnet-SystemTechnik and HBE Hydraulik-Komponenten, we are developing system solutions from one single source in direct contact with our customer. The delivery range extends from “pump free shaft” to a complete unit with

- High precision flow measurement
- Advanced evaluation electronics
- Permanent magnetic couplings
- Conversion kits
- Bellhousings
- Foot flanges
- Damping elements

The special requirement profiles for individual and system solutions result from the close corporation between manufacturer and user. Technical consultation and guidance tailored to our clients' needs and a thorough understanding of the application requirements round off our worldwide customer service.

Examples for individually developed system solutions:

- Metering pumps for polyols with abrasive fillers and separate bypass valves
- Metering pump with block chamber for the polyurethane industry as a complete unit with gear box motor, bellhousing and coupling
- Complete unit in bronze version for foam agent pump with integrated flow meter and safety valve

More information on delivery pumps can be found in our product catalogues. We would be glad to advise you depending on your customised requirements.
